Company Profile

Numiton is a start-up company specialized in automated software migrations. We believe the time has come for this idea to become mainstream, so that legacy applications can be safely brought into the modern IT world. Our goal is to build a software migration system accommodating multiple source and target languages. Automated migration from PHP to Java is a first step in this direction.

Goals, Fields and Forms of Cooperation

- companies with legacy PHP applications
- software integrators that standardize on Java technologies and want to integrate existing PHP applications
- entities with interest in PHP based open-source projects and investigating a rewrite to Java

Areas of Specialization

Automated software migration, legacy migrations

Areas of Application

IT/Software

Own Products

nTile PtoJ is an automated software migration system that translates PHP source code into Java/Java Enterprise Edition source code. The resulting application looks and behaves similarly to the original, structure and semantics are fully preserved. The servlets, Spring MVC and custom output flavors guide the output architecture.

Software Projects and Services Offered

We provide migration services based on nTile PtoJ to translate software from PHP to Java in the most cost-effective way. A multiple-phase process reduces the customers' risks and produces a custom-tailored, high-quality solution. Technology transformations to better use the Spring MVC framework features and object-relational mapping with Hibernate/JPA are also options in subsequent phases.

Technical Expertise

Extensive expertise with automated software migration and compiler technologies.
